REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: Best reference noted is Horton, art cited by Applicants on September 14, 2005. Despite similarity of its device's invention with the present invention, the latter still distinguishes over the former in that the position of the beam splitter 21 of the patent is not in the arrangement to define the delay loop of the device, and in that this beam splitter is not divided into a plurality of zones of differing reflectivity (this beam splitter 21 has a 50% transmission and a 50% reflection on either of its surfaces). As is further noted, the present invention utilizes only one surface of the beam splitter, whereas that of the patent makes use of the two surfaces of the beam splitter. As conclusion, with all limitations considered, the two inventions carry out the same result in which the pulse replicas are spatially displaced and temporally spaced with each replica having the same energy, but they have different structures, wherein the structure of the patent's device is more complicated than that of the present invention, therefore less economical in terms of components used.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Loha Ben whose telephone number is (571) 272-2323.
